Penetration Testing - Executive Summary

Document ID: E01 / PT-2024-09 | Supplier: Cedarline Analytics Ltd | Issued: 20 September 2024

FICTIONAL training material. All organisations, statements, evidence and dates in this case are simulated.

1. Scope and testing dates

External penetration test of Cedarline Portal API and web console; fieldwork 9-13 September 2024. This executive summary covers the 2024 release only.

2. Summary of observations

Finding	Rating	Status as at report
Excessive login attempts not rate-limited on legacy admin endpoint	Medium	Open - target October 2024
Information disclosure through verbose API errors	Low	Remediated during fieldwork

3. Limitations

This document is not a statement about testing in 2025 or 2026. No 2026 test report, retest letter or current vulnerability status is included. Observations may no longer reflect the current production environment.

4. Evidence citation anchor

E01 page 1, sections 1-3. Comparing dates is the first analyst step: the supplier questionnaire claims a July 2026 penetration test, but the supplied file is explicitly dated 2024.
