Supplier Security & Processing Statement

Document ID: E05 / ASSURANCE-2026-10 | Supplier: Cedarline Analytics Ltd | Issued: 20 October 2026

FICTIONAL training material. All organisations, statements, evidence and dates in this case are simulated.

1. Hosting and encryption

Production workloads run in EU cloud infrastructure. Storage encryption at rest is enabled and TLS 1.2 or higher is required for external application connections. Operational configuration snapshots were checked by the supplier security team on 15 October 2026.

2. Subprocessors

Provider (fictional)	Service	Location
Aster Cloud Services	Infrastructure hosting	Ireland
Northstar Messaging	Transactional email	Germany

3. Certifications and external audit

The supplier has not provided an ISO 27001 certificate or a SOC 2 Type II report for this review. A planned 2027 certification programme must not be interpreted as completed certification.

4. Evidence boundaries

This is supplier self-attestation, not an independent audit. Detailed configuration evidence was not enclosed; the analyst should distinguish a supplier statement from independently verified control effectiveness.

Evidence citation anchor

E05 page 1, sections 1-4. Questionnaire states there are no subprocessors and ISO 27001 certification is current.
